Taylor Logs 7,000th Backflow Device

Taylor Plumbing now tests and certifies more than 7,000 backflow devices every year. In addition to testing, Taylor also installs and repairs backflow devices. The backflow technicians carry a full inventory of replacement parts in their specially-equipped trucks.

From a very small part of the company's overall business 15 years ago, backflow testing and certification has become a major department at Taylor Plumbing. Taylor's other departments are Service, Construction and Irrigation.

The EPA mandates that backflow devices be certified annually. Backflow devices prevent bad water from flowing back into our drinking water.

WATER TRIVIA

The only water we will ever have is what we have right now.

Once groundwater is polluted it may remain that way for several thousand years.

WATER TRIVIA (cont)

Did you know?

- It can take 120 gallons of water to produce an egg.
- Human blood is 83% water. Human bones are 25% water.
- Running the tap waiting for water to get hot can waste 5 gallons per minute.
- Each day the sun evaporates a trillion (1,000,000,000,000) tons of water.
- The people of the United States use as much as seven billion gallons (7,000,000,000) of water each day.

NEW CONTEST

The prize for our April-May contest is **dinner and theater for two** at the Drury Lane Oakbrook. Take your favorite partner for a wonderful evening out. You can enter the contest by visiting our website:

www.taylorplumbing.com

If you don't have access to the internet, send us a fax or letter with your name, company, address, telephone number and the words "Drury Lane." We will make sure you are entered. The drawing will be May 15, 2003.

FINAL THOUGHT

Everyone seems normal
until you get to know them.
