Alarming Rate

Imagine a river rushing from your laundry room, spilling hundreds of gallons of water per hour, over your carpets, into your floorboards and onto your furniture. The cause? Your washing machine hose has sprung a leak. The cost of repairs? Anywhere from a few hundred dollars to more than \$10,000!

In the year 2000, State Farm Insurance received more than 7500 water damage claims just from faulty washing-machine hoses! Those leaky hoses caused more than \$150 million in property damage alone!

The fact is more homes are damaged by water than by fire! Every year billions of dollars are spent repairing damage from leaky pipes, sewer backups and flooding.

When you add in faulty plumbing products, such as dishwashers, water heaters, water closets, etc., the water damage potential is mind-boggling! Call our office for more information about our "state of the art" WATER ALARM. It really works!

"The Plumber Protects The Health Of The Nation"

A licensed plumber must be able to perform numerous jobs. From blueprint reading, job layout to the final installation of a plumbing system. They must be able to use the various tools of the trade safely. They must be able to follow safety procedures and maintain a safe work environment. They must complete a five-year apprentice program while working on-the-job. They must be able to install and service many types of plumbing systems and equipment. Our techs have these credentials. That's why we feel we have the best-trained and most qualified plumbers working for Taylor Plumbing.

Water Conservation

Water conservation is every person's responsibility. 99 percent of the earth's water is in the ocean. Only 1 percent is available for human consumption. That is why it is so important to use water wisely. If every home in this country had a faucet that dripped one drop a second, we would waste 928 million gallons of water each day. That's enough water to fill more than 7-1/2 billion 8 oz glasses. There are a number of ways to save water, and they all start with you! Here are a few ways to conserve your water

- Check your irrigation system frequently.
- Check your water meter and bill to track water usage.
- Install low-volume toilets and faucets.
- Checks your toilets for leaks by putting food coloring in the tank.
- Only run your dishwasher and wash machine when full.

Since 1914

Here are a few facts about the year 1914, the same year Taylor Plumbing was established.

- Greyhound Bus was started.
- More cars than horse drawn carriages are registered.
- Commercial passenger aviation is started. Washrooms are added 5 years later.
- Haired as a wonder drug, cocaine was outlawed.
- Cleveland, Ohio introduces the first red and green traffic light.
- Congress established Mother's Day.
